POP Features

Ovenized Oscillator (OCXO)

Orbital Research now has three OCXO Oscillators depending on your requirements:

- 1) Our standard offering for most applications
- 2) Our enhanced offering with better phase noise
- 3) Our Airborne offering with better immunity to vibration and a greater temperature range.

Mux/Tee (as secondary modules)

- Highpass filtered L band, rolloff below 900 MHz, flat 950 thru 2900 MHz
- Very low bandpass ripple
- Very high Rx to 10MHz port isolation (no leakage back to receiver)

Functional

- Will operate with LNBS, BDCs, VSATs, BUCs, and Modems

Structural

- Machined from solid aluminum billet for strength and stability
- Allodyne finish for corrosion protection and excellent RF shielding/grounding
- Connectors are 'O' ring sealed for weather resistant operation
- RoHS & REACH compliant

Power Supply

Orbital advises that a separate power supply be used for each power input (Oscillator and secondary package) as one power supply for both can cause extraneous signals to be transferred to the Oscillator, which can degrade its performance.

Because the POP is ovenized, it can draw as much as 350 mA during startup, as it heats to operating temperature.
